When's the last time you found a trip to the store exciting?

Introducing the Club Car Villager LSV, the street-legal, zero-emission, electric way to get around.

Running to the store for a few things? Give your gasoline-powered vehicles a break and use the electric Villager LSV 2+2. It's legal to drive on many city streets with speed limits of 35 mph or less, carries up to four adults, and never has to stop for gas.

Villager is a smart alternative for short trips when gasoline-powered cars are at their least efficient. When you think about it, you save on gas, reduce wear-and-tear on your other cars, and help preserve the environment for future generations — all at the same time.

Tax credits of up to \$4,168 — nearly half the purchase price — are available if you qualify when you buy a new Villager LSV before Dec. 31. See your dealer for full details!
